Use An Encrypted Email Service

Problem

- Email services, like Gmail, Microsoft, Bing and Yahoo have access to your emails.
- There is no privacy using these services. (Imagine your postal service looking through your mail before placing it in your mailbox, are you ok with that?)
- Your emails and associated metadata is harvested and sold to advertisers.

Solution

Encrypted email service providers don't peak into your inbox. These servers are so secure that not even the Governments can access them with a warrant.

Best of all. They are free.

protonmail.com

Secure email: ProtonMail is free encrypted email.
